What are the clinical and operational elements health systems need to have in place to support a scalable RPM program?

What are the lesser-known technical challenges providers may experience when constructing the infrastructure to support an RPM program?

What are some of the greatest misconceptions you've heard with regard to concerns about bringing in PGHD?

How do you merge the episodic care model  
of the in-hospital environment with the  
continuous care model needed to support  
RPM?

Are data standards still a market challenge with regard to PGHD and integrating these data points in the clinical environment?

What new CPT codes -- or code changes --  
can we expect to see over the next few  
years to support PGHD usage?

# Q&A
